## PROGRAMMABLE FUNCTION CONVERTER

- 
- Completely user configurable in spreadsheet format
  - 3 Analogue In, 2 Analogue Out Fully Configurable mA or Voltage
  - 2 Digital In, 2 Digital Out
  - Extensive Maths & Logic Capability
  - Full 3-Port Isolation
  - RS232 / 485 Comms including MODBUS protocol
  - Mass and Energy Flow for Steam, Gases and Liquids
  - Integration, Frequency Measuring and Frequency Generation
  - Intelligent Trip Applications
  - Linearisation of Signals
  - Timing and Dosing Control
  - PID Control

The Chameleon programmable function converter is a microprocessor based signal conditioning unit which allows the linearisation and conversion of multiple input channels. The Chameleon has three analogue input channels, two digital input channels, two digital output channels and two analogue output channels. The unit has a wide range of computational functions which are user selected to generate the required outputs.

The Chameleon can be factory set for dedicated applications or be configured by the end user. This configuration can be done using a variety of terminals, examples being any IBM compatible PC, a PSION II organiser, or any dumb terminal. The configuration is fully menu driven with a spreadsheet style format, allowing the Chameleon to be tailored very quickly and easily to each application.

In the simplest configuration the Chameleon could be used to linearise a single analogue input, invert it and re-transmit it in standard form and provide high and low alarm relay outputs. More complex operations are also possible. For example, the Chameleon could accept any input from a differential pressure transducer, extract the square root, linearise the result according to a second input (temperature for instance) and output this in both pulse and analogue outputs proportional to flow. A relay output would also be available for either a high or low alarm output.

Additionally information can be relayed by RS485 or RS232 data communication channels for remote monitoring and configuration.

The functions are pre-programmed and structured so that some may be combined with others to provide a very powerful and flexible solution to process computing problems. These functions include PID algorithms and timer functions.

The Chameleon is housed in an ultra compact custom enclosure which allows the device to be DIN-Rail or surface mounted in two different orientations.

## TECHNICAL SPECIFICATION

### Input Channels

#### Analogue

Number of Channels: 3  
Types: 0-20mA  
4-20mA  
0-10V  
Software Selectable  
Impedance: Current - 300Ω  
Voltage - 100KΩ  
Resolution: 10 bit or 0.1% of F.S.D.  
Accuracy: ±0.15% of F.S.D.  
Temperature Stability: 100ppm / ≅C  
Transmitter Supplies: 20V ±15% @22mA per channel

#### Digital

Number of Channels: 2  
Types: Volt Free Contacts  
Open Collector  
Others Available - Contact Sales  
Operating Modes: Logic, Frequency, Pulse Count  
Software Selectable  
Frequency Range: 0 to 1kHz  
Measured Resolution: 1.333 μsec  
Resolution Error: 0.0013% @ 10Hz  
0.13% @ 1kHz  
Temperature Stability: 50ppm / ≅C  
Wetting Voltage: 22Vdc @ 5mA

---

### Output Channels

#### Analogue

Number of Channels: 2  
Types: 0-20mA  
4-20mA  
0-10V  
Software Selectable  
Load Impedance: Current - 500Ω Maximum  
Voltage - 1000Ω Minimum  
Resolution: 11 bit or 0.05% of F.S.D.  
Accuracy: ±0.2% of F.S.D.  
Temperature Stability: 150ppm / ≅C

#### Digital

Number of Channels: 2  
Types: Volt Free Contacts -Standard  
Open Collector (Optional)  
Operating Modes: Logic, Frequency  
Software Selectable  
Frequency Range: 0.0002 to 1kHz (50Hz Relay)  
Output Resolution: 2.666 μsec  
Resolution Error: 0.0026% @ 10Hz  
0.26% @ 1kHz  
Temperature Stability: 50ppm / ≅C  
Relay Rating: 3A @ 240Vac

---

### Communications

#### RS232 or RS485

Comms Type: Half Duplex  
Baud Rate: 9600 Baud  
Data Bits: 8 (7 in Modbus Mode)  
Parity: None (Even in Modbus Mode)  
Start Bits: 1  
Stop Bits: 1  
Protocols: Proprietary Text Protocol  
Modbus ASCII Protocol

### Other

#### Isolation

Full 3 Port Isolation to 500V  
Inputs & RS232 / Outputs / PSU / RS485

#### Power Requirements

24Vdc ±10% at up to 350mA (Max Load Conditions)
