INDUSTRIAL ETHERNET INFRASTRUCTURE PRODUCTS

- Wide range of Ethernet Switches and other Infrastructure equipment

- Industrial hardened, high MTBF

- Copper and Fibre ports, redundant loops

- Cost-effective proven solutions

Description

A wide range of Industrial Ethernet switches are available from Industrial Interface, including devices from the following manufacturers:

> NTRON
> Hirschman
and Moxa

These manufacturers produce industrial hardened managed and un-managed switches with proven reliability in industrial environments.

The NTRON range, for example, includes devices with MTBF figures of greater than 2 million hours.

Switches include ports for copper and fibre and redundant ring configurations, remote monitoring of switch performance and ESD protection are all featured in these products.

Industrial Interface has valuable experience in this field and can configure and set up switches for your particular network, as well as supplying switches to work alonside Industrial Interface Ethernet I/O modules.

For a full listing of devices available or technical assistance in designing your network please contact our sales department.

Example Application 1: Remote monitoring of remote equipment via an Industrial Ethernet network.
